## POCKET / STORAGE CAVITY & CEILING TRACK

Product Range: Folding Closures

### Storage Pocket / Cavity

Commonly referred to in the industry as “The Pocket”, these purpose built cupboards are for storing the folding closure when not in use.

‘B’ the width of the pocket should be no less than 300mm. If the track is curved into the pocket the radius of the curve will determine the width requirements.

The formula for the depth of the pocket is determined as follows;

100mm of pocket space per linear metre of door opening + 75mm per locking post. (e.g. If your opening is 4m and your door layout includes 4 locking posts you would need a minimum of 700mm of pocket depth)

The team at Scotty Doors can work out your pocket requirements for you.

### SCOTTY DOORS CEILING TRACK

Our track has been designed for added strength – extruded aluminium section 46mm high x 36mm wide. When curved tracks are required we will supply standard radius sections (45° and 90°) Refer technical guides. Custom Curve applications are available, the radius must be nominated (restrictions apply) and a template may be required. Customs Curves require a two week lead time for fabrication.
